Our team

Finomic – Personal Finance Dashboard

- A full-stack web application (frontend + backend)
- Helps users track income/expenses, view spending categories, and monitor financial health
- Built for individuals who want a simple, secure, and visual finance tool

VITE

FIREBASE

Goals

Provide an intuitive dashboard with total balance, income vs. expenses

Enable full CRUD operations on transactions

Visualize spending by category and over time (monthly trends)

Implement secure user authentication (signup/login/password reset)

Ensure responsive design for mobile and desktop

Services and data requirements

SERVICES :

- User registration, login, password reset
- Personal financial dashboard overview
- Income and expense record management (add, edit, delete, filter)
- Expense category analysis and visualization
- Monthly financial reports and trend charts

DATA REQUIREMENTS:

- User profile data (email, UID)
- Transaction data (user, amount, description, category, date)
- Application state (current user, selected filters)
- Data currently stored in localStorage (client-side)

Tasks

- Design responsive UI & user flows
- Implement client-side routing & auth guards
- Build transaction management (add, edit, delete, search, filter)
- Create category insights & chart visualizations
- Integrate Firebase Auth (email/password, verification, reset)
- Write modular JavaScript (state management, services)
- Test across devices and browsers
- Prepare documentation & presentation

Challenges

Protecting private routes

Keeping UI in sync with data

Firebase credentials security

responsive sidebar on mobile

Auth guard + redirect logic

Event-driven updates & modular services

Environment variables (.env with Vite)

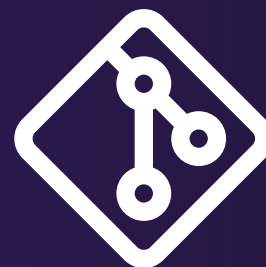

CSS media queries + JavaScript toggle

Deliverables

**Fully functional
web application**

**Source code on
GitHub repository**

Project Demo

TATIANA	Login, Sign up, Reset password pages + Firebase Auth config
DIANA	Dashboard, Transaction page + Main layout & CSS/JS
EFFY	Categories & Reports page + Corresponding CSS/JS
EDITH	Help page + Corresponding CSS/JS + Sidebar
DIOGO	my-money API integration + helpers.js, transactions.js

Division of work & contribution

Criteria of success

- User can sign up / log in / log out securely
- Transactions can be added, edited, deleted, and searched
- Dashboard shows correct totals (income, expense, balance)
- Category insights update automatically
- Monthly trend chart displays correctly
- Page is responsive (works on phone, tablet, desktop)
- No major console errors or broken routes

Evaluation

- **Functional testing:** All user stories pass
- **Usability testing:** 3 classmates tested the app
- **Code quality:** Modular structure, consistent naming, comments where needed
- **Performance:** Fast loading (Vite build), no unnecessary re-renders
- **Security:** Firebase rules restrict access; no hardcoded keys

Learning

INDIVIDUAL LEARNING

- Mastered HTML/CSS/JS development and independently implemented pages and interactions.
- Learned Firebase authentication, API calls, chart rendering and route permission control.
- Improved problem-solving, modular coding and documentation skills.

TEAM LEARNING

- Experienced team collaboration and full project development process.
- Mastered Git version control to avoid code conflicts.
- Enhanced communication, joint debugging and problem-solving efficiency.
- Practiced complete full-stack web application development.

Authentication

Secure signup/login with email verification and password reset functionality, all powered by Firebase Auth

- User signup with email verification
- User login
- Forgot password / password reset via email
- Protected routes (auth-guard)
- User profile (displayName stored in Firebase)
